  3. Proposed Solution (2-3 lines)
  4. Plan of Work
    - a. Scope, Process, Estimated Time, Minimum Iterations etc.
- 

### 1. Project Title: Gujranwala Inventory Futuristics Trade (GIFT) System

### 2. Problem Statement:

We do not have any proper inventory control system. Managing inventory with paperwork and manual processes is difficult and not secure. It doesn't easily scale across multiple warehouses with lots of stock. We want to change paperwork into Digitalis system.

### 2. Proposed Solution:

By using Gujranwala inventory futuristic trade (GIFT) system, it is a desktop-based system that keeps a record of sales and purchases that will be stored in the system and for prescription, we will use a printer. Our system will control the mess of records into sequence form.

### 3. Plan of Work:

#### Scope:

- The scope of the GIFT system will keep record of products in inventory.
- It will provide security against unauthorized users.
- It will provide the facility to sell and purchase the products.
- It will provide the facility to find a product from the system.

#### a. Stakeholders:

- Computer Operator

#### b. Process Model :

Agile Model

#### c. Minimum Iteration:

1 Iteration

#### d. Estimated Time:

Estimated time is 10 weeks
